

(12) United States Patent Pease et al.

(10) Patent No.:

US 6,558,513 B1

(45) Date of Patent:

May 6, 2003

(54) NON-AQUEOUS RELEASE FROM PAPER MACHINE EQUIPMENT

(75) Inventors: Jacqueline K. Pease, St. Augustine, FL (US); William A. Hendriks,

Jacksonville, FL (US)

(73) Assignce: Hercules Incorporated, Wilmington,

DE (US)

(57) ABSTRACT

Disclosed is a method of improving the release of paper webs from the surface of press rolls or other paper making or converting equipment by applying to such a surface non-aqueous, non-curing hydrocarbon polymer compositions. The non-curing hydrocarbon polymers have the formula $(CH_3)_3C-[-C(R_1)(R_2)-C(R_3)(R_4)-]_n-C(R_5)$ = $C(CH_3)_2$ (I) wherein R_1 through R_3 are hydrogen or $-CH_3$, with at least one of R_1 through R_4 being $-CH_3$, and R_4 is such that the number average molecular weight of such hydrocarbon polymers is from [50] [112] to 3000. They may be hydrogenated. Preferred non-curing hydrocarbon polymers are polybutenes of the formula $(CH_3)_3C-[-CH_2-C(CH_3)_2-]_n-CH=C(CH_3)_2$ (II). Preferred compositions comprise at least one such hydrocarbon polymer component having a number average molecular weight from 400 to 700 and a second such component having a number average molecular weight of [100] [12] to 400. The compositions are applied to the equipment surface in the absence of water.
